

This project is for:

Finding recommendations to increased operating costs because of the additional chair lift and keep the profit margin at 9.2%.

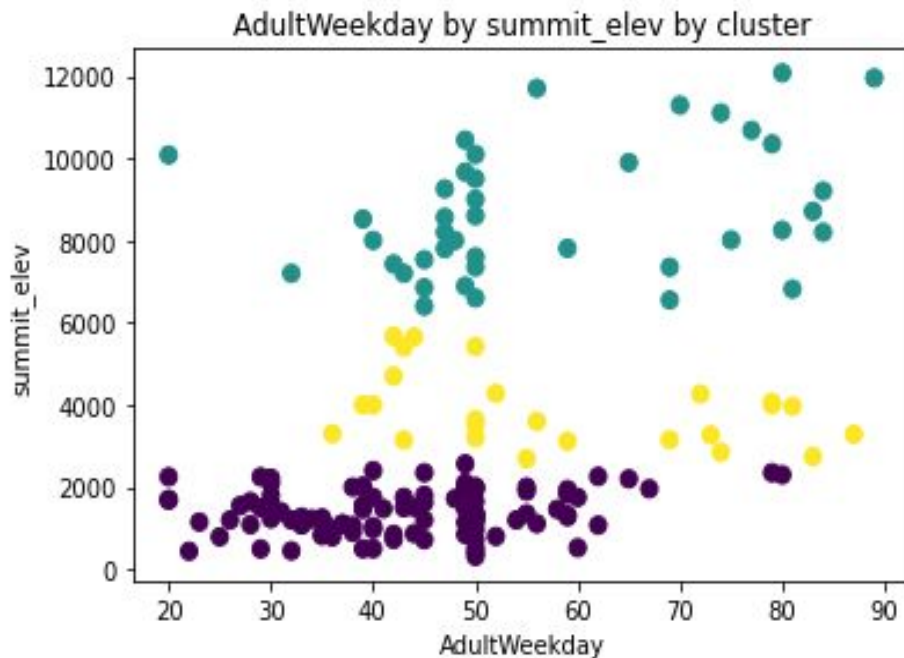

In order to recoup increased operating costs:

- ➡ Reasonable raise to weekend and weekday ticket prices.
- ➡ Extension for projected days open in the upcoming season.

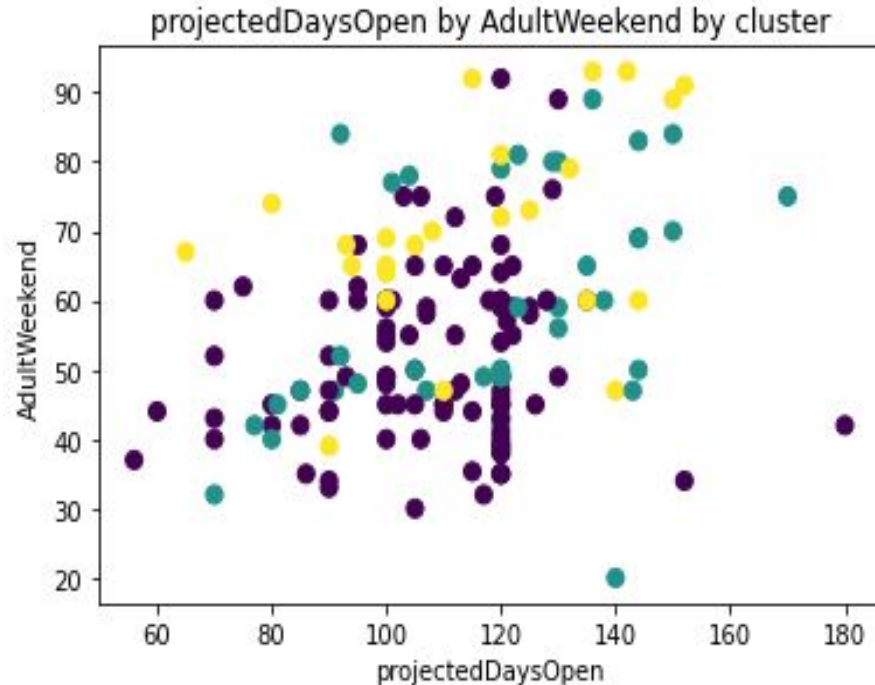

According to the best model:

Resort names, states, and regions have not an effect on weekend-weekday ticket prices.

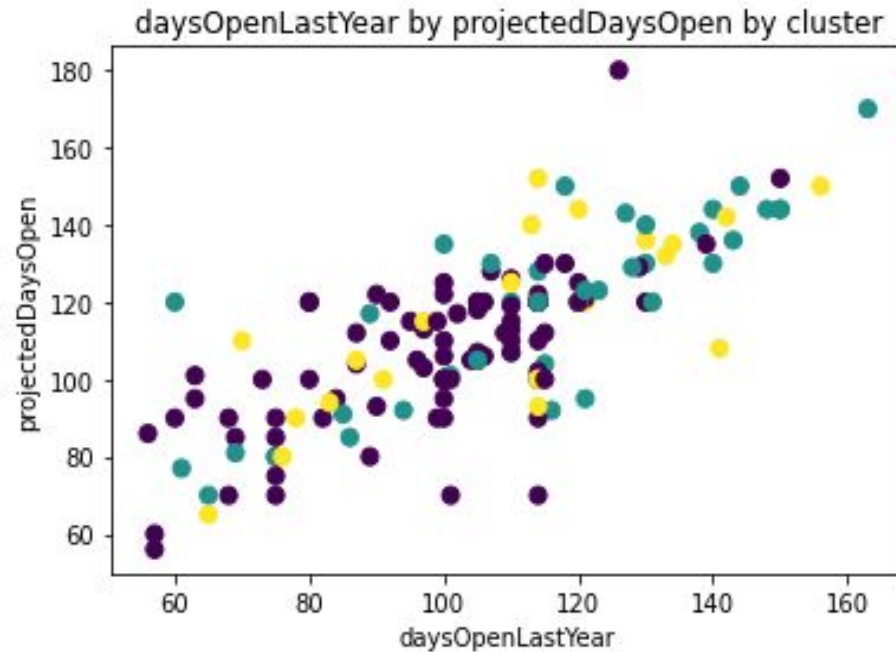

Summit elevation have a reasonable effect on adultweekday ticket prices.

Projected days open in the upcoming season have a considerable effect on ticket prices.

Projected days open in the upcoming season, and the total number of days open last year are related.

All results are considered:

- ➡ A raise for the price of an adult weekend-weekday chair lift ticket is convenient. A ticket price for the weekend is reasonable at around \$82.12.
- ➡ Extension for the projected days open in the upcoming season contributes to profit margin.
